

Tables ECTS (European Credit Transfer System) for grade conversion

The ECTS method is the tool adopted by the European Union to ensure the correct and transparent transfer between the different national evaluation systems of the results obtained by students in terms of grades.

According to the ECTS Users' Guide, published in 2015 by the European Commission, the procedures for transferring grades have been changed.

The previous ECTS scale divided into 5 levels (A: higher 10%; B: next 25%, C: next 30%, D: next 25%; E: lower 10%) has been eliminated and replaced by the statistic distribution of grades based on the scale used in the different national systems, drawn up by group of homogeneous courses, and called the table ECTS for the conversion of grades.

The new table allows an immediate and transparent comparison between two national assessment systems, guaranteeing students the correct recognition, in terms of grades, of the results obtained outside their own country.
